Understanding 1st Grade Addition and Subtraction Addition and subtraction are two of the most important operations in mathematics for first graders. Addition means putting together two groups or numbers to find their total, using the symbol + (plus). Subtraction means taking away one group or number from another to see what is left, using the symbol - (minus). These skills are the building blocks for more advanced maths in higher grades. Example of Addition: If you have 4 apples and get 3 more, you have $(4 + 3 = 7)$ apples. Example of Subtraction: If there are 6 candies and you eat 2, $(6 - 2 = 4)$ candies are left. Visual aids like number lines, counters, and pictures help make these ideas clear for young learners. Addition and Subtraction Worksheets Structure Most 1st Grade Addition and Subtraction Worksheets are designed to cover: Single-digit and double-digit addition and subtraction (no carrying or borrowing) Sums and differences up to 20 Picture-based problems to visualize calculation Fill-in-the-blank, matching, and multiple-choice problems Simple word problems to relate maths to real-life Mixed addition and subtraction worksheets for extra practice Key Concepts and Example Problems Addition: Count all objects together or move right on a number line. Subtraction: Cross out or remove objects, or move left on a number line. Number Bonds: Groups of numbers that make another number (e.g., 7 is made from 4 and 3). Word Problems: Using stories to apply addition or subtraction. For example: What is $(8 + 6)$? (Count using fingers or draw 8 and 6 objects, then add) If Ria has 10 balloons and gives away 4, how many are left?
