faster and more efficient. However, don't go on board and spend too much time on this unit plane. Keep it practical, going into the process outlined below. Some articles of official nature include include pieces, but we all know there's only so many hours in a day. Let's keep it real. Sometimes school districts will provide a detailed unit plan, but other times they provide something more vague, such as the title of a unit and the number of days you have to teach the content within the unit. P5160: I found unit plans to be incredibly effective in maximizing my planning and scaffolding learning for my students. 1. Break the standards I like to start with the standards and break down the various skills and concepts. Some districts require that they be written as áœœ! Caná™ statements and used as daily targets. Although you're not required to have them, it's a great idea to post them and share your daily goal with your students throughout the class. The idea here is to identify what students should be able to do at the end of the unit Á. 2. Determining a Summary Assessment If you like to give performance assignments or a written test, determine how you will evaluate students. P5160; Once you have determined the type of assessment, it is a good idea to write down the questions or the assignment. 160; Obviously, this is sometimes impractical. P5160; I'd like to say that this happened before any unit Á, but the reality is that it has always been a goal. 160; When I did, I was always satisfied and more prepared to teach the unit. If you can't assemble a test at this stage of planning unit, it would be helpful to have an idea of the types of questions you want to use or to have looked at an example test or evaluation released. In Texas, they take the state exam every few years. The main point here is to understand how the assessment will be, you as a teacher will be able to better prepare your students. It is possible to know the framework of lesson planning, understanding by project, to which That is the fundamental concept. 3.194; 160? At this point, I take a calendar and a pencil and I start putting On paper. 160; Consider what skills have been learned in the previous years and where gaps can exist, so that you can place additional emphasis and time on such areas. . 160; Note the lessons that can be more difficult to allow students to familiarize themselves with the content. Á I also include summary and training assessments on the calendar. 4. 194; 160; Incorporated Mathematical Practices At this point, I really like to look at the different goals and skills and brainstorming as I can incorporate mathematical practices (in Texas we call them process standards) through the activities. . This could mean stations where students are analyzing for error or laboratory on triangle construction. Tip... I really like to incorporate a day flex per unit á, if possible. Á Otherwise, many teachers shoot for a flex day per month. . This helps when an unexpected assembly occurs and the program is thrown away or when a concept is really a struggle and you need more time. . It allows you to have a small breathing space and gives you permission to take the necessary time without ruining the plan. If all this seems overwhelming, then you can easily choose and choose some of the things mentioned and work to incorporate them. . 160; If you are short of time, you may be interested in my middle school mathematical curriculum units that incorporate the things mentioned in the post. I'm fine.
